

CHAPTER VI

SYSTEM TESTING

System testing is designed to check the functionalities that have been developed on the application. System testing is performed by running the application. By doing system testing, the application can achieve the expected results. Furthermore, system testing is performed to determine whether the application runs properly or still has bugs. There are two points discussed in the system testing and evaluation which are testing scenario, and evaluation.

6.1. Testing Environment

Testing environment is the system functionalities that used for testing the DietProject application. With some certain hardware and system, the application is required to fulfill the scope and limitation of the system testing.

The application is tested using the following devices with specifications as follow:

- Samsung Galaxy Grand 2 (Android Version 4.2.2 Jelly Bean)
- Asus Zenfone 4 (Android Version 4.4.2 Kitkat)

6.2. Testing Scenario

Testing Scenario is implemented in several sections: Main Activity Section, User data Section, Add Activity Section, and Other Scene Handling Section.

Table 6.1 Main Activity Section

No	Scenario	Expected Result	Result
1	Runs the application for the first time	Start with User data	As Expected
2	Runs the application for the first time	Start with MainActivity.java	As Expected
3	Taps on update User Data	User data screen is loaded	As Expected
4	Taps on add Activity	Add Activity screen is loaded	As Expected

Table 6.2 User data Section

No	Scenario	Expected Result	Result
1	Enter User data Section	Load latest existing User saved data	As Expected
2	User fill all required field and tap save button	Save data to database. Update User data	As Expected
3	User does not fill all required field and tap save button	Pop notification to fill all data	As Expected

4	User press back	Return to Previous screen	As Expected
---	-----------------	---------------------------	-------------

Table 6.3 Add Activity Section

No	Scenario	Expected Result	Result
1	Enter Add Activity Section	Load Layout	As Expected
2	Taps Breakfast	Load Breakfast	As Expected
3	Taps Lunch	Load Lunch	As Expected
4	Taps Dinner	Load Dinner	As Expected
5	Taps Snack	Load Snack	As Expected
6	Taps Workout	Load Workout	As Expected
7	User Press Back Button	Return to Activity Screen	As Expected

Table 6.4 Add Breakfast Section

NO	Scenario	Expected Result	Result
1	Enter Add Breakfast Section	Load Layout	As Excepted

2	Tap Add Food	Load Add Food Screen	As Expected
3	User Press Back Button	Return to Activity Screen	As Expected

Table 6.5 Add Lunch Section

NO	Scenario	Expected Result	Result
1	Enter Add Lunch Section	Load Layout	As Excepted
2	Tap Add Food	Load Add Food Screen	As Expected
3	User Press Back Button	Return to Activity Screen	As Expected

Table 6.6 Add Dinner Section

NO	Scenario	Expected Result	Result
1	Enter Add Dinner Section	Load Layout	As Excepted
2	Tap Add Food	Load Add Food Screen	As Expected
3	User Press Back Button	Return to Activity Screen	As Expected

Table 6.7 Add Snack Section

NO	Scenario	Expected Result	Result
1	Enter Add Snack Section	Load Layout	As Excepted
2	Tap Add Food	Load Add Food Screen	As Expected
3	User Press Back Button	Return to Activity Screen	As Expected

Table 6.8 Add WorkOut Section

NO	Scenario	Expected Result	Result
1	Enter Add WorkOut Section	Load Layout	As Excepted
2	Tap Add Food	Load Add Workout type Screen	As Expected
3	User Press Back Button	Return to Activity Screen	As Expected

Table 6.9 Food List Section

NO	Scenario	Expected Result	Result
1	Enter Add Food List Section	Load Layout	As Excepted
2	Tap Food	Add Food to activity based on context. Back to Activity screen	As Expected
3	User tap add new food	Load Add new food Screen	As Expected
4	User Press Back Button	Return to Activity Screen	As Expected

Table 6.10 Workout Type List Section

NO	Scenario	Expected Result	Result
1	Enter Add Workout Type List Section	Load Layout	As Excepted
2	Tap Workout Type	Add Workout Type to activity based on context. Back to Activity screen	As Expected

3	User tap add new Workout Type	Load Add new Workout Type Screen	As Expected
4	User Press Back Button	Return to Activity Screen	As Expected

Table 6.11 Add New food Section

NO	Scenario	Expected Result	Result
1	Enter Add New food Section	Load Layout	As Expected
2	User fill all required field and tap save button	Save data to database.	As Expected
3	User does not fill all required field and tap save button	Pop notification to fill all data	As Expected
4	User Press Back Button	Return to Food List Screen	As Expected

Table 6.12 Add New Workout Type Section

NO	Scenario	Expected Result	Result
1	Enter Add New Workout Type Section	Load Layout	As Excepted
2	User fill all required field and tap save button	Save data to database.	As Expected
3	User does not fill all required field and tap save button	Pop notification to fill all data	As Expected
4	User Press Back Button	Return to Work out Type List Screen	As Expected

6.3. Testing Result

The expected results in the tables above show that the Dietproject is working properly based on the requirements so far. The actual result that is conducted shows the same result with the expected result. It means that the Diet project requirements are successfully developed and deployed.
