

CHAPTER VII

CONCLUSIONS AND FUTURE WORK

7.1.Conclusions

Diet Project application has managed to achieve the objectives of this thesis, such as:

- Assists the user to know the calorie amount of foods.
- Record the amount of calorie they eat every day.
- Count Body Metabolism Rate and Daily Calorie Needs.
- Help users reach their desired weight through healthy living habit.

Diet Project is an Diet application that not only helping it's users to gain their ideal weight but also helping them to maintain their weight through a healthy lifestyle that already implanted in their way achieving ideal weight while using DietProject applications.

7.2.Future Work

Although the system development has been done and the system offers such an interactive and attractive feature, DietProject is expected to meet some further development, such as:

- Cloud based data storages
- A Social media focusing on people who want to change that promote healthy Lifestyle through Friendships,etc

Also using the system already presented in DietProject applications. There are many application Possible to be developed at later dates.
